

Skills and Technical Knowledge

- 5 years of industry experience across the full stack, primarily in Python, JavaScript & Postgres, including extensive work with Django and FastAPI over the last 4 years.
- Expert in LLM integration and multi-model AI systems (OpenAI, Gemini, Claude); experience with RAG, vector databases, async processing, and voice agent orchestration.
- Hands-on experience in containerization and orchestration using Docker and Kubernetes, including end-to-end deployment and management within Azure environments.
- Proficient in designing, developing, and maintaining DBMS Schemas, functions, triggers, and more, both through ORM tools and direct SQL. Strong hands-on experience with Postgres.
- Other well-known languages and technologies include Git, Node, Go, Convex, Linux, macOS, Azure & AWS services.

Work Experience

Full Stack Engineer - (Aurelium India Pvt. Ltd. - Prev. Fullthrottle Labs Pvt. Ltd.)

- **Scouto** — AI recruiting partner

February 2025 - Present

At Scouto, I work in a fast-paced environment building an AI-powered hiring agency. My focus is agentic AI — autonomous workflows that combine LLMs, voice agents, and real-time data to handle sourcing and outreach without manual intervention. (Worked on both PyjamaHR and Scouto in parallel from Feb 2025–Aug 2025; since then, exclusively on Scouto.)

- Key Accomplishments:
- Built a **RAG-powered help center chatbot** using vector-indexed knowledge bases, enabling semantic search across thousands of help articles. Addressed challenges like chunking large documents, semantic context preservation, and relevance ranking to deliver accurate, context-aware answers.
 - Built an **autonomous lead scraper** that discovers relevant prospects from **LinkedIn and Exa**, then scores them on the fly using AI reasoning to surface only high-quality leads — eliminating hours of manual prospecting.
 - Developed an **AI voice agent** powered by **Gemini Live API** and **Telnyx/Plivo** telephony that autonomously cold-calls scored leads and pitches Scouto's services. Achieved a **75% connection rate** with **9% positive outcome rate** across the fully autonomous flow.
 - Integrated Gemini models to analyze call recordings from multiple dimensions, using async processing to evaluate hundreds of calls within minutes with high reliability.

Technologies used: TypeScript, Node, NextJS, Convex, Gemini, ChatGPT, PromptLayer, Vapi.ai, Telnyx, Plivo, Exa, Qdrant, OpenAI Embeddings, Pinecone.

- **PyjamaHR** — AI-powered ATS & recruitment platform

August 2023 - August 2025

At PyjamaHR, I am responsible for end-to-end feature development, deployments and maintenance, 3rd party integrations, building data pipelines, server maintenance and more.

- Key Accomplishments:
- Led development of a monetized **AI-powered video interview chatbot**, which became a hit among international clients and drove significant revenue growth.
 - Built a **multi-model resume parser** achieving **99% success rate** by intelligently routing between **OpenAI and Gemini Flash**, optimizing cost while handling diverse resume formats and edge cases.
 - Optimized the React frontend by restructuring the project and build process with lazy loading and code splitting, cutting initial page load from **~7s to ~0.5s**.
 - Rewrote the reports API to handle **50M+ candidate records** across thousands of jobs, delivering **results in under a second**.

Technologies used: Django, PostgreSQL, Celery, React, NextJS, Redis, Redux, Docker, Kubernetes, Node, Pipecat, Go, Git and Azure Services.

Software Engineer (Full Stack) - Highbreed India Development Pvt. Ltd.

- **Mrkt365** — Digital marketing & automation platform

July 2021 - August 2023

At Mrkt365, I handled end-to-end feature development in a microservices architecture — reliable backend APIs, 3rd party integrations, UI component development, and occasional DevOps.

- Key Accomplishments:
- Developed and integrated a real-time messaging application using WebSockets and RabbitMQ for seamless inter-user communication, which drove a **measurable increase in user engagement**.
 - Engineered a super admin portal from scratch — backend, frontend, and integration — giving the operations team **full self-service control** over the platform.

Technologies used: FastAPI, PostgreSQL, React, Angular, Git, Rabbit MQ, Docker, Celery, and AWS Services.
